

Juhi Bhandari

juhibhandari774@gmail.com | [linkedin.com/in/juhi-b](https://www.linkedin.com/in/juhi-b) | github.com/jabhandari | jabhandari.github.io

Skills

Languages: JavaScript, TypeScript, HTML, CSS, Java, Python, SQL, ESQL

Libraries: React, Vite, Node.js, Express.js

Databases: MongoDB, PostgreSQL

Tools & Platforms: IBM App Connect (IIB), Docker, Git, Jira

Concepts: REST APIs, JWT Authentication, Scrum/Agile, Unit & Integration Testing

Experience

Software Engineer — Cash Management Technology

Dec 2025 - Present

Scotiabank | Toronto, ON

Tech: IBM App Connect Enterprise (IIB), ESQL, SQL, Enterprise Payment Systems

- Diagnosed and resolved transaction-processing failures across multiple IBM App Connect flows by rewriting faulty ESQL data-mapping logic, restoring payment workflow integrity and unblocking downstream processing.
- Closed environment-parity gaps between local and UAT by writing targeted SQL queries against live transactional data, ensuring fixes survived multi-week release cycles without regression in production.
- Eliminated invalid transaction-state transitions in a high-availability payment platform by auditing and correcting state-machine configurations, reducing the risk of silent payment failures reaching production.

Projects

Devflow ([GitHub](#)) - [Live Demo](#)

React, Vite, Node.js, Express, MongoDB, JWT

- Engineered a full-stack productivity platform from scratch, cutting developer daily standup logging time by eliminating manual tracking across 3+ separate tools.
- Secured all REST API routes with JWT + bcrypt auth and CORS configuration, reducing attack surface for unauthorized access across a multi-origin deployment.
- Shipped a split-deployment architecture (Vercel + Render) with zero hardcoded secrets, enabling one-command environment switching between dev and production.

QuickCard ([GitHub](#)) - [Live Demo](#)

React, Node.js, Express.js, Puppeteer, QRCode, Vite

- Built a single-form platform that generates a shareable card, QR code, and print-ready PDF resume simultaneously — eliminating the need to maintain separate assets.
- Implemented server-side PDF generation via Puppeteer, achieving pixel-perfect HTML-to-PDF fidelity without relying on any third-party resume builder services.
- Decoupled the frontend and backend entirely via Axios REST API, enabling independent deploys and reducing cross-team integration bugs.

Superstore Dashboard ([GitHub](#))

Python, Streamlit, Pandas, Matplotlib

- Built a zero-config analytics dashboard processing 10,000+ retail records with auto schema detection — reducing data prep time from hours to a single file upload.
- Delivered 4 cross-linked filter dimensions (region, category, date, product) that update 6+ KPI cards and charts in real time, replacing static Excel reports.
- Extracted all data logic into a standalone analysis.py module, cutting chart generation code duplication by ~60% and enabling reuse across future projects.

Hackathons - MLH Production Engineering Hackathon(LatencyLens) ([Github](#))

Docker, Prometheus, Grafana, Alertmanager, Redis, Nginx

- Built a real-time latency monitoring and observability system to detect API bottlenecks and system failures.
- Integrated Prometheus and Grafana dashboards with Alertmanager to trigger alerts via Discord webhook for downtime exceeding 60 seconds.
- Designed for reliability and zero-downtime monitoring using containerized services.
- Achieved: Overall: Tied for 3rd Place, Incident Response: Tied for 2nd Place
- Scalability: Tied for 2nd Place, Reliability: Tied for 2nd Place, Documentation: Tied for 1st Place

Education

Diploma in Computer Programming — Seneca Polytechnic

Jan 2024 – Apr 2025

GPA: 3.6/4.0 | Graduated with Honours

Bachelor of Science (Pursued) — University of Mumbai

Aug 2021 – Dec 2023

CGPA: 9.7/10
